12G Fibre Near End

This 12G Fibre Near End converter converts SDI over fibre into SDI electrical via the BNC.

It also transmits RS485 data and genlock up the second fibre. If using the matching 12G Fibre Far End or a BR Remote camera it enables both control and genlock on the same twin fibre.

The connectors on the PCB are **JST EH4 series** and are in parallel so can be looped from PCB to PCB in a multi PCB application.
