SDI Re-Clocker

This **SDI Re-Clocker** has 2 independently buffered outputs enabling it to be used as a Distribution Amplifier as well. It can re-clock signals up to 3G and the cable drivers give a co-ax cable range of 100m or more. Using 1 re-clocker every 100m can increase the cable range to several hundred metres. (depending on the quality of the cable).

Manufactured from extruded and machined aluminium it is extremely rugged, designed for broadcast applications. Inputs and outputs are standard 75Ω BNC connectors.

The **SDI Re-Clocker** can be used with any equipment, not just BR Remote equipment, making it a very versatile piece of kit. But if you are using BR Remote equipment the internal electronics can be integrated into our remote heads.

For longer ranges you may need to use fibre. See our **Mini Fibre System**.

Dimensions: 120mm x 87mm x 36mm

Power: 12v @ 100mA, XLR4
