

MiniPos

Mini Positioning Head

- **Lightweight**
- **Cost Effective**
- **Preset Positions**

The new **MiniPos** is an extremely cost effective positioning head for small cameras - like the BR Remote **HD16** or any other small lightweight camera. It is ideally suited to use in fixed camera positions to offer alternative shots from the same camera. Although not designed for smooth, live-action moves it greatly extends the effectiveness of fixed camera positions by enabling remote pan and tilt adjustments and can store preset shot positions.

Made in tough ABS plastic it has standard 1/4" mounting threads on the base and fixings for the HD16 or other cameras using 1/4" camera bolts.

It operates from any **BR Remote** or **BRADLEY** controller and can store up to 8 preset positions of pan and tilt. The BR Remote **HD16** camera can store the zoom and focus positions to match.

2 standard camera brackets are available;

- 'L' shaped for side mounting
- 'T' shaped for top mounting

The 'L Bracket' keeps the camera in balance and the camera will remain in position when power is removed

The 'T Bracket' has a narrower profile but needs power to keep the camera in position when tilted from the horizontal.

Specify which bracket you need when ordering. In addition, custom brackets can be produced to order.

Specifications

Size: H.80, D.70, W.45. + Camera Plate H.64, D.108, W.67.

Power: RS485, 9600baud

Max Load: 500gms

Pan Range: 180 Deg.

Tilt Range: +/- 26 Deg. (Can be configured for more)

Weight: 190gms
