

Instructions

Quite simply - the simplest joystick ever!

All functions are controlled with the joystick which has 3 modes;

1. **Pan & Tilt**
2. **Zoom & Focus**
3. **Menu Scroll & select**

The modes are changed with the touch-down switch on the joystick. You can either **tap** the switch or **hold down** the switch.

A **tap** is less than 0.5 second

A **hold down** is more than 0.5 second

The joystick powers up in **Pan & Tilt** mode. To toggle between **Pan & Tilt** mode and **Zoom & Focus** mode, just **tap** the joystick switch.

To enter **Menu Scroll** mode, **hold down** the joystick switch. Then use the joystick to navigate the menu.

To exit **Menu Scroll** mode, **hold down** the joystick switch.

Connections:

DC jack : 12 – 35v

XLR4: on a flying lead. This has both power & data for a remote head.

Note: The supplied power supply is 12w. This is enough for some cameras but not for others. Check the power consumption of the camera you are using. Include the lens motors if fitted. If needed, use a 2nd power supply near to the camera with a break-out cable.

There is a connector on the PCB inside which can be used to connect a **Remote Camera Panel** or other equipment into the system. When data is being received the LED will flash.

Note: Not all functions apply to all camera models. Check camera specification for applicable functions.

Function List

Home Menu

Pan & Tilt Control

Tap

Zoom Focus Menu

Zoom & Focus

Hold Down

Menu Scroll

Joystick up/Down to Scroll

Joystick Left/Right to change value

Head Functions

Pan Gear

Tilt Gear
